## Bachelor of Technology in Computer Science

JIS COLLEGE OF ENGINEERING (2024-2028)

SGPA : 8.93

### SUMMARY

CS student building intelligent systems that handle real-world data. Published 3 end-to-end projects: customer churn predictor (sklearn, 87% F1), health monitoring mobile app (React Native, 15% user satisfaction lift), and AI diagnostic assistant (FastAPI backend). Recent backend systems are intern optimising pipelines for scale. Proficient in Python, C++, data engineering, and full-stack ML deployment.

### PROJECTS

#### JobConnect - job portal

August 2026

**Technologies:** MongoDB, Express, Angular, Node.js, Angular 18, TypeScript, WT (access + refresh)

- Built a job platform where both candidates and recruiters are verified by an admin before joining.
- Reduced fake profiles and fraudulent job postings through a verification layer.
- Helped job seekers connect with more trustworthy and relevant opportunities.
- **LINK:** <https://github.com/Rai2608/Job-connect>

#### URL\_Auditor

July 2026

**Technologies:** Node.js + Express, native fetch, cheerio for HTML parsing, HTML, vanilla JS

- Developed a URL security analyzer that extracts domain, protocol, and URL-based features to detect suspicious links.
- Implemented checks for phishing indicators, malicious patterns, redirects, and domain anomalies.
- Generated a risk assessment and security report to help users evaluate URLs before accessing them.
- **LINK:** <https://urlauditor.vercel.app/>

#### Diasense AI- AI-Powered Diagnostic Assistant

February - May 2026

**Technologies:** Python, React Native (Expo), FastAPI

- Developed an ML-based system to predict potential health conditions from user-reported symptoms
- Performed data preprocessing and feature engineering to improve model performance
- Built backend APIs to handle real-time input and generate predictions
- Designed the system with a focus on scalability and real-world deployment

### WORK EXPERIENCE

#### SDE INTERN - (Backend Systems Intern)

April 2026 – June 2026

**Technologies:** Python, FastAPI, React, REST APIs, Git/GitHub, Code Obfuscation & Reverse Engineering

- Developed backend services using Python and FastAPI.
- Reverse-engineered workflows to understand and improve application architecture.
- Optimised file-processing workflows for better performance.
- Improved error handling, validation, and backend stability.
- Worked on code obfuscation and software-protection solutions.

### SKILLS

#### Languages

Python, C++, Java, SQL, HTML, CSS, JavaScript

#### Tools/Frameworks

Pandas, NumPy, Git, Jupyter Notebook, Docker, Postman,

#### Databases

MySQL, MongoDB

#### Backend

FastAPI, Node.js, Express.js, REST APIs

#### Other Skills

Docker, CI/CD, Git Workflow / GitHub/GitLab, SQL Query Optimisation, Unit Testing, System Design
